PROFESSIONAL SUMMARY

Business and technology professional with a background in Business Information Technology and experience across software development, quality assurance, and technology operations. Skilled at understanding business and user needs, identifying problems, and working with technical and non-technical stakeholders to develop practical solutions. Combines business understanding with technical knowledge to help shape digital products that address real customer needs and business goals.

EXPERIENCE

Independent Digital Consultant
June 2026 – Present

AW Digital Solutions

Worked directly with clients to understand their business needs, define website requirements, and shape digital solutions from concept to implementation. For a cardiovascular clinic, translated the doctor's goals into a website designed to expand the clinic's online reach and provide a platform for sharing educational articles with patients and students. Also collaborated with a clothing brand to plan and develop a customised Shopify store, making UI and UX decisions to support its online shopping experience.

Technical Support and QA Analyst
April – June 2026

Swift Hailing Ltd

Handled user support tickets and conducted quality assurance testing across the POS app, Manager app, and web dashboard. Identified difficulties tracking payments made partly through M-Pesa and partly in cash, then worked with the team to develop a solution that reduced reconciliation errors and made split payments easier to track. Wrote user manuals to help e-commerce clients understand the system's features and use them effectively.

Observability Engineering Associate
January – March 2026

M-Pesa Africa

Joined the observability engineering team to research how Dynatrace, Azure, and Grafana could be integrated into a federated monitoring system. Evaluated the tools' capabilities and contributed to the frontend design of a unified monitoring dashboard, which received approval ahead of a management presentation. The research and design work helped inform the proposed system's direction before development.

Academic Technical Lead
2024 – 2025

Challenge Driven Education Project, Strathmore University

Led the development of a waste-management awareness website in collaboration with the Strathmore Environmental Club. Coordinated requirements, design, and development to turn the project's goals into a functional platform that supported environmental awareness and education.

Junior Web Developer
2023 – 2025

P-Tech Systems

Designed website pages and product listings, uploaded product descriptions and images, and maintained websites for clients in the solar and energy sector, including Satte and SB Innovations, applying SEO best practices. During an internship with Norwa Africa, collaborated with stakeholders to shape website designs aimed at improving conversion. Later designed and developed the Sigma Engineering website from concept to implementation, helping improve the company's online visibility and reach potential customers.

EDUCATION

Strathmore University
2023 – 2026

Bachelor of Business Information Technology, Second Class Honours (Upper Division)

Member, Strathmore Computing and Engineering Students Association

Strathmore University
2021 – 2022

Diploma in Business Information Technology, Merit
